SUMMARY

Final-year AI Engineering student with hands-on experience building production-grade RAG systems, multimodal retrieval pipelines, and Arabic-first NLP. Skilled at integrating LLMs (DeepSeek-V3), vision-language models (BLIP2), and Arabic NLP (AraBERT) with vector databases (FAISS), and shipping them through clean FastAPI / Laravel backends. Open to Machine Learning Engineer roles.

TECHNICAL SKILLS

- AI & Machine Learning:** RAG, LLMs (DeepSeek-V3), Diffusion (DDPM / LayoutDM), BLIP2 (VLM), AraBERT, FAISS, Collaborative Filtering (ALS), PyTorch, TensorFlow, scikit-learn
- Frameworks & Libraries:** FastAPI, NestJS, Next.js, Node.js, Laravel, React, LangChain, Prisma, Apollo / GraphQL, Three.js
- Databases & Storage:** FAISS (Vector), ChromaDB, PostgreSQL, MySQL, HNSW Indexing
- DevOps & Tools:** Git / GitHub, Docker, REST APIs, Linux, Postman
- Languages:** Arabic (Native), English (Professional)

EXPERIENCE

AI Engineer — Trendova Jan 2024 – Present
RecomindSystem · Remote

- Developed and deployed a production-grade RAG system using DeepSeek-V3 for multilingual chatbot functionality.
- Implemented a multimodal retrieval pipeline integrating BLIP2 vision-language models with Arabic NLP (AraBERT v2).
- Built a scalable vector database with FAISS + HNSW indexing for real-time product search.
- Designed a hybrid recommender combining collaborative filtering (ALS) and content-based approaches.
- Achieved 90%+ accuracy in Arabic–English cross-lingual retrieval and cut response latency by 40%.

Backend Engineer — MediCore Jan 2023 – 2024
Medical Management System · Remote

- Built a comprehensive medical platform with Laravel serving patients, doctors, secretaries, and admins.
- Architected 20+ interconnected models — appointments, medical files, profiles, and specialties.
- Implemented multi-role auth with RBAC, two-factor authentication, and Laravel Sanctum tokens.
- Designed RESTful APIs for booking, file uploads, dynamic doctor search, and real-time notifications.

SELECTED PROJECTS

TrustAngle — AI Social-Media Platform (Graduation Project)
Microservices SaaS that auto-generates social-media designs via a hybrid diffusion pipeline (LayoutDM + DDPM, trained from scratch). 21-model PostgreSQL schema, JWT/RBAC, multi-tenant workspaces & billing.
Diffusion (DDPM/LayoutDM), PyTorch, Next.js, NestJS, FastAPI, PostgreSQL

RecomindSystem — Production RAG
Production RAG with DeepSeek-V3, multimodal BLIP2 + AraBERT retrieval over a FAISS/HNSW vector store, plus an ALS hybrid recommender. 90%+ cross-lingual accuracy, 40% lower latency.
DeepSeek-V3, FAISS, BLIP2, AraBERT, FastAPI

Mualimi — Offline AI Tutor (Gemma Hackathon)

Offline AI tutoring platform: Gemma via Ollama with a LangChain + ChromaDB RAG engine. React 19 PWA + FastAPI (30+ endpoints), image-based problem solving, adaptive quizzes.

Gemma, Ollama, LangChain, ChromaDB, React

Arabic Text Separators — Punctuation NLP

Deep-learning punctuation restoration for Arabic: a 7-class token-classification model (BiLSTM / Transformer + AraBERT transfer learning) on the UNPC corpus — ~96.2% validation accuracy.

TensorFlow, BiLSTM, AraBERT, Arabic NLP

MediCore — Medical Platform Backend

Full Laravel backend: 20+ interconnected models, multi-role RBAC with 2FA & Sanctum, appointment scheduling, dynamic doctor search, secure medical-file management.

Laravel, PHP, MySQL, Sanctum, REST

threejs1 — 3D Game in Three.js

Browser 3D game with a custom water shader (WaterPlus), a flying jet, and a physics module — real-time WebGL rendering.

Three.js, WebGL, Shaders, JavaScript

EDUCATION

B.Sc. in Artificial Intelligence Engineering — University of Damascus

Expected 2026

Damascus, Syria
