01 About

Final-year AI Engineering student at the University of Damascus with hands-on experience building production-grade RAG systems and multimodal retrieval pipelines.

I specialize in integrating LLMs (DeepSeek-V3), vision-language models (BLIP2), and Arabic NLP models (AraBERT) with vector databases (FAISS) — and shipping them through clean APIs.

On the engineering side I build production backends with Laravel & FastAPI, and interactive 3D experiences with Three.js — this very site (and my threejs1 game) is one of them.

LOCATION

Damascus, Syria

FOCUS

RAG · NLP · Laravel · Three.js

LANGUAGES

Arabic · English

STATUS

Open to ML roles

```
class MLEngineer:
    name          = "Malek Imam"
    role           = "AI / ML Engineer"
    ai_stack       = ["PyTorch", "FAISS",
                     "LangChain", "LLMs"]
    eng_stack      = ["Laravel", "FastAPI",
                     "Three.js", "React"]
    specialties    = ["RAG", "Arabic NLP",
                     "Backend", "WebGL"]

    def ship(self, idea):
        return production_ready(idea)
```

02 Experience

AI Engineering Intern — Trendova

Jan 2024 - Present

RecomindSystem · Remote

- ▶ Developed and deployed a production-grade RAG system using DeepSeek-V3 for multilingual chatbot functionality.
- ▶ Implemented a multimodal retrieval pipeline integrating BLIP2 vision-language models with Arabic NLP (AraBERT v2).
- ▶ Built a scalable vector database with FAISS + HNSW indexing for real-time product search.
- ▶ Designed a hybrid recommender combining collaborative filtering (ALS) and content-based approaches.
- ▶ Achieved 90%+ accuracy in Arabic-English cross-lingual retrieval and cut response latency by 40%.

Node.js

Backend Engineer — MediCore

Jan 2023 - 2024

Medical Management System · Remote

- ▶ Built a comprehensive medical platform with Laravel, serving patients, doctors, secretaries, and admins.
- ▶ Architected 20+ interconnected models — appointments, medical files, profiles, and specialties.
- ▶ Implemented multi-role auth with RBAC, two-factor authentication, and Laravel Sanctum tokens.
- ▶ Designed RESTful APIs for booking, file uploads, dynamic doctor search, and real-time notifications.
